(i) $\sum_{n=1}^{\infty} \kappa x_n$ is also a convergent series and further

$$\sum_{n=1}^{\infty} \kappa x_n = \kappa \sum_{n=1}^{\infty} x_n$$

(ii) $\sum_{n=1}^{\infty} (x_n + y_n)$ is a convergent series and further

$$\sum_{n=1}^{\infty} (x_n + y_n) = \sum_{n=1}^{\infty} x_n + \sum_{n=1}^{\infty} y_n$$

* Defn

Absolute convergence: A series $\sum_{n=1}^{\infty} x_n$ is said to converge absolutely if the series $\sum_{n=1}^{\infty} |x_n|$ converges.

A series is called conditionally convergent if it is convergent but not absolutely convergent.

* Lemma

If a series $\sum_{n=1}^{\infty} x_n$ is absolutely convergent then it is also convergent

* Lemma

Let $\sum_{n=1}^{\infty} x_n$ and $\sum_{n=1}^{\infty} y_n$ are series s.t. $0 \leq x_n \leq y_n \quad \forall n \in \mathbb{N}$ then

(comparison test)

(i) If $\sum_{n=1}^{\infty} y_n$ is convergent then $\sum_{n=1}^{\infty} x_n$ is absolutely convergent

(ii) If $\sum_{n=1}^{\infty} x_n$ diverges then $\sum_{n=1}^{\infty} y_n$ also diverges.

* Lemma

The series $\sum_{n=1}^{\infty} \frac{1}{n^p}$ where $p \in \mathbb{R}$ is convergent if and only if $p > 1$

* Lemma

Let $\sum_{n=1}^{\infty} x_n$ is a series s.t. $x_n \neq 0 \quad \forall n \in \mathbb{N}$ and if $L = \lim_{n \rightarrow \infty} \frac{|x_{n+1}|}{|x_n|}$ then

(Ratio test)

(i) If $L < 1$ then $\sum_{n=1}^{\infty} x_n$ converges absolutely

(ii) If $L > 1$ then $\sum_{n=1}^{\infty} x_n$ diverges
